Introduction

Northern Heat Pump is a manufacturer of ground source heat pumps (GSHP). Ground source heat pumps get their name from the fact that they transfer energy to and from the earth. The source can be an open loop or closed ground loop heat exchanger. Each can be installed using a variety of methods. Since ground source heat pumps only move heat and do not create heat, the efficiencies are three to four times greater than fossil fuel systems. Heat pumps are inherently safe and environmentally friendly as they run entirely on electricity and no combustion is required to produce heat.

Northern Heat Pump produces five types of XTERRA SERIES units:

- 1. ForcAir and ForcAir2 (water to air)
- 2. Aqua2 and Aqua3 (water to water)
- 3. **Sourc3** (combination air/water to water)

Forced air heat pumps can be used typically where ever forced air heating and cooling is required. Proper application and correct installation will ensure excellent performance, comfort and customer satisfaction.

Water to water heat pumps can be used in a wide variety of applications residentially and commercially. Some include: hydronic baseboard heating, radiant in-floor heating, space heating/cooling using fan coils, swimming pool applications and many other system design possibilities.

Designed and built in Canada, Northern Heat Pump units perform well in the most extreme to moderate climates all around the world. Northern Heat Pump is committed to quality as every unit is performance checked before leaving our facility. This is just one more step to ensure customer satisfaction.

Features and Benefits:

Cabinet

The cabinet, which allows easy access for installation and service, is constructed of heavy gauge stainless steel. The stainless steel cabinet offers the best in corrosion resistance and durability.

Insulation

Cabinets and refrigerant piping are insulated to reduce condensation and compressor noise. Cabinets are insulated with ½" thick acoustical fiberglass insulation.

Compressor

All XTERRA SERIES heat pumps use high efficiency scroll compressors for reliability and efficient operation. The scroll compressor's unique design lends itself to having one of the lowest sound levels in the industry. The compressor is mounted on rubber cushions to further reduce vibration and noise. A dual capacity compressor is used on ForcAir2 units.

Heat Exchangers

The water to refrigerant heat exchangers are canister style heat exchangers with an enhanced internal heat exchange surface.

Refrigeration Circuit

All low-side copper tubing in the refrigeration circuit is insulated to reduce condensation at low entering fluid temperatures.

Filter Drier

All heat pumps have a factory installed filter drier for dehydration and cleaning of the refrigerant circuit. This feature adds to the life of the unit.

Expansion Valve

Northern Heat Pump provides a bi-flow balanced port externally equalized thermal expansion valve. This valve precisely meters refrigerant flow through the refrigerant circuit to achieve the desired heating or cooling over a wide range of operating conditions.

Reversing Valve

The reversing valve enables the unit to operate in heating or cooling mode. It is controlled by 24 VAC circuit set to failsafe at heating position.

Water Connections

All water connections feature ¾" NPT female fittings. All connections are flush mounted therefore a back up wrench is not required when tightening.

24 Volt Controls

Electrical controls and safety devices are factory wired and tested. The controls include: compressor contactor, 24 volt transformer, solid state lockout board, reversing valve and desuperheater fuse (optional desuperheater).

Safety Devices

Each Northern Heat Pump unit contains safety devices to prevent compressor damage. These include: low pressure switch, high pressure switch, flow switch and internal overload protection.

Low Pressure Switch

The low pressure switch prevents compressor operation under low charge, loss of refrigerant or extremely low temperature conditions.

High Pressure Switch

For internal overload protection a high pressure switch is provided. This de-energizes the compressor should the discharge pressure become excessive.

Lockout Protection

When the safety controls are activated to prevent short cycling and compressor damage, the lockout board interrupts the compressor circuit preventing compressor operation. The board can be reset at the thermostat or by shutting off power to the unit and switching back on.

Thermostat Hook-up

Low voltage and high voltage knockouts are provided on both the left and right sides of the unit. All control wiring is 24 volt.

Desuperheater Option

The desuperheater option is a heat recovery system packaged within the heat pump. This option captures extra heat energy from the heat pump for domestic hot water savings. The Desuperheater remains active in both heating and cooling mode. This provides hot water at a reduced cost in heating mode, and virtually free hot water while in cooling mode. The internal desuperheater option includes; a double walled heat exchanger suitable for potable water, internal circulating pump, high temperature control (120°F de-energizes circulation pump), fuse, flush mounted 3/4" NPT female water connections.

Flow Switch

De-energizes the unit when ground loop fluid flow drops below a minimal GPM.

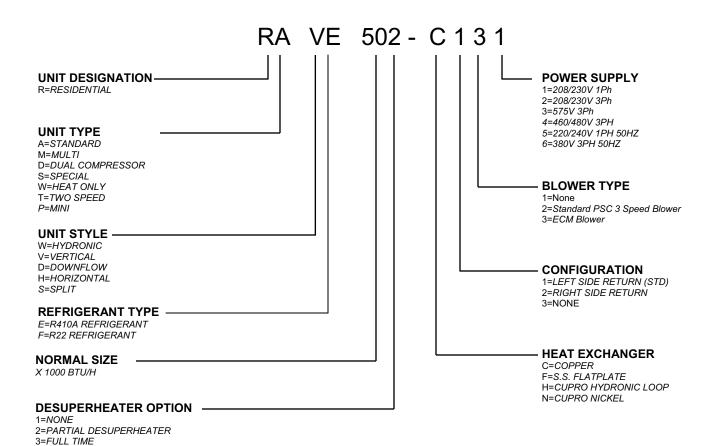

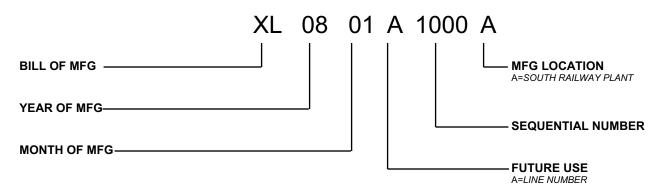

RESIDENTIAL MODEL # DESCRIPTION

SERIAL # DESCRIPTION

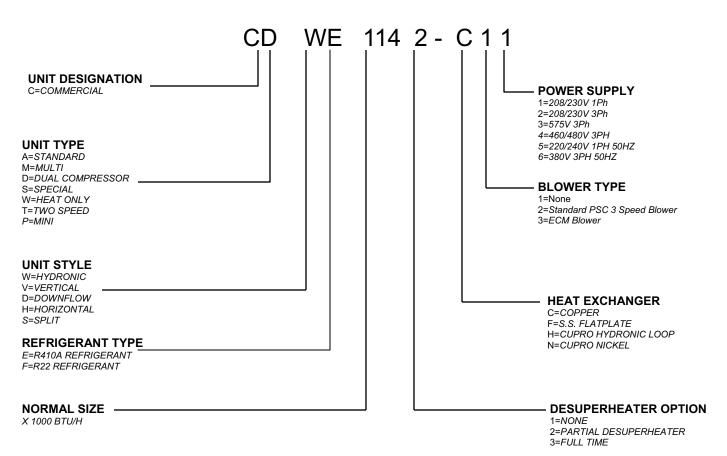

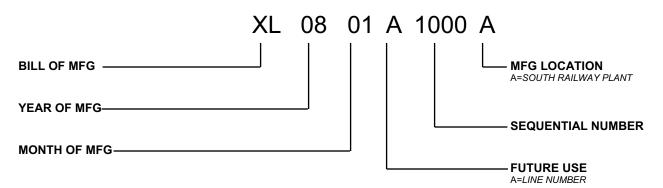

COMMERCIAL MODEL # DESCRIPTION

SERIAL # DESCRIPTION

Efficiently heats and cools by transferring natural earth energy into the space, creating a comfortable indoor environment.

Effectively heats and cools through forced air distribution using conventional ductwork systems.

FORCAIR units are ideal for new construction and retrofit applications.

Environmentally Friendly

Xterra Series heat pumps transfer usable energy (heating & cooling) without the production of unhealthy gases. Xterra Series heat pumps use non-ozone depleting R410A refrigerant.

Optional Hot Water Generation

Extra cost savings may be realized by choosing a desuperheater option. This feature extracts superheated refrigerant gas to supplement domestic hot-water heating.

Performance Tested

Xterra Series units are run tested and supplied with actual performance data prior to being shipped from the factory. This is another way to ensure the highest quality in every Northern Heat Pump unit.

Features:

- Stainless Steel, Non Corrosive Cabinet
 Attractive appearance; promotes longevity
- Single Capacity Compressor
- Removable Side Panels

Accommodates ease of service and installation

User Friendly

Using market familiar components, provides ease of availability & service

Energy Efficient/Cost Effective

Efficiencies up to 400% provide ongoing energy savings

• Variable Speed ECM Blower Motors

Quiet, efficient, and factory programmed for optimal performance and added savings

Optimally Sized Heat Exchangers

Provide superior performance and added efficiency

Quiet Operation

Acoustical cabinet insulation and compressor blanket ensure quiet operation

Warranty

5 year standard; 10 year optional*

Effective: January 01, 2009

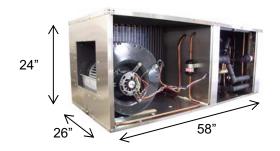

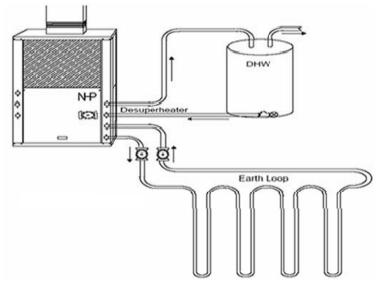

^{*} optional packages

Typical Piping Diagram:

Standard Features:

- Insulated Stainless Steel Cabinets
- Removable Side Panels
- Top Discharge (Vertical)
- Left Side Return
- CuproNickel Heat Exchanger
- ECM Blower Motor
- Single Phase Electrical 208/230 Volt
- LED Electronic Diagnostics
- Copeland Scroll Compressor
- Compressor Blanket
- 5 Year Warranty

Options:

- Horizontal Discharge
- Right Side Return
- 3 Phase Electrical; 208, 230, 460, 575 Volt.
- PSC 3 Speed Blower Motor
- Desuperheater supplements DHW up to 65%
- Electric Auxiliary Heater 5KW, 10KW, 15KW, 20KW
- 10 Year Warranty

60-8039B	Glycol, non toxic Propylene/220 kgs barrel (infloor only)

60-LC4

Loop Start-Up Conditioner (4 oz)

 Helps condition and eliminate small leaks or drips in connections.

Noise/Vibration Reduction

60-BASEPAD

Silent Base Pad 28" x 28"

- 5/8" rubber
- Made from recycled materials

60-BASEPAD	Silent Base Pad 28"x28"
60-BASEPAD2	Silent Base Pad 28"x40"

Hose & Fittings

45-075SWIV

3/4" MPT x 1" Swivel Nut (Brass)

45-075SWIV	3/4" MPT x 1" Swivel Nut (Brass)
45-100SWIV	1" MPT x 1" Swivel Nut (Brass)

45-125500

Geothermal Hose

- Rated to 160 psi
- Available in 600, 800, 1000 ft

45-125500	1-1/4" SDR 11 Loop Pipe (600, 800, 1000 ft)
45-75SDR11	3/4" SDR 11 Loop Pipe (600, 800, 1000ft)

50-TRV1000

Clear Braided Hose

• 100ft ID clear braided hose

50-TRV1000	1" ID PVC Clear Braided Hose
------------	------------------------------

Hose Cross Section

Hose and Fittings

45-1BRIMA

- 1" Brass Barb x 1" MPT (left)
- Also available in Nylon (right)

Flow Meters

20-LDF359N

Vertical In-line Flowmeter

- 3/4" FIP ports
- 2-16 GPM and LPM calibrations

20-F301001P

Horizontal Flowmeter

- For 1" schedule 40 or 80 pipe. 5-40 GPM or 20 to 150 LPM calibrations
- Other models available for 1", 1 1/4", 1 1/2", 2", 2 1/2", 3", 4", 6" and 8" pipe OR copper tubing.

20-F301001P	Horizontal Flowmeter for 1" Pipe (quick install)

Fittings and Miscellaneous Items

20-GC10

Flow Restrictor

- 3/4" FIP for 5 10 GPM
- 1" FIP for 12 15 GPM

20-GC5	Flow Restrictor 3/4" FIP 5GPM
20-GC10	Flow Restrictor 3/4" FIP 10GPM
20-GC12	Flow Restrictor 1" FIP 12GPM
20-GC15	Flow Restrictor 1" FIP 15GPM

20-SDF100

Spin Down Sediment Filter

- With PVC flush valve for easy maintenance
- Suited for higher flow rates and ease of maintenance.

 100 Mesh poly screen spin down filter body with clear bowl.

60-214903

Socket Fusion Tool Kit

- With depth gauge and cold ring tools for 3/4" and 1 1/4" pipe.
- Includes heater sling bag. 120volt.
- Other pipe sizes available.

Xterra Series Heat Pumps Residential and Commercial Warranty Schedule

Residential Applications Only:

All Parts-1 Year and Labor

On Year 1, NHP will replace defective parts, F.O.B Winkler MB, prepaid freight only. Defective parts include only parts that fail due to defective material or workmanship and not improper installation. NHP will cover the cost of the labor to replace the defective part according to, and not exceeding, NHP Labor Allowance Schedule

All Parts-2 Years

Years 1 and 2, Northern Heat Pump Inc. (NHP) will replace defective parts, F.O.B Winkler, MB, prepaid freight only. Defective parts include only parts that fail due to defective material or workmanship and not improper installation.

Refrigeration Components-5 Years (Optional 10 years)

On years 3 through 5, NHP will replace defective refrigerant components including compressor, expansion valve, evaporator, condenser and reversing valve F.O.B Winkler, MB, prepaid freight only, that fail due to defective material or workmanship and not from improper servicing, misapplication, or neglect.

Stainless Steel Cabinet-Lifetime

NHP will warranty all stainless steel cabinet panels, due to defective material, for the lifetime of the unit.

Commercial Applications Only:

All Parts 1 Year and Labor

On Year 1, Northern Heat Pump will replace defective parts, F.O.B Winkler MB, prepaid freight only. Defective parts include only parts that fail due to defective material or workmanship and not improper installation. NHP will cover the cost of the labor to replace the defective part according to, and not exceeding, NHP Labor Allowance Schedule

Refrigeration Components-3 Years

On years 2 through 3, NHP will replace defective refrigerant components including compressor, expansion valve, evaporator, condenser and reversing valve, F.O.B Winkler, MB, prepaid freight only, that fail due to defective material or workmanship and not from improper servicing, misapplication, or neglect.

Exceptions To Warranty

This Warranty does not apply to:

- 1. Any portion of the system not supplied by Northern Heat Pump.
- 2. Scratches, dents or discoloration, on or in surfaces of products or units.
- 3. Air filters, fuses, refrigerant and oil.
- 4. Products or components that have had I.D. nametags or faceplates altered, removed or defaced.
- 5. Products that have defects or are damaged due to a harsh environment, including corrosive liquid or air supply or operation at abnormal temperatures.
- 6. Products or units damaged during shipment.
- 7. Products or units damaged from: improper service, installation, wiring, electrical, inadequate air flows, fire, floods, misapplication, modification, acts of God, rupture or breakage of the water condenser coil or tubing if subject to freezing applications without proper protection.
- 8. Products or components that are field altered from original factory design.
- 9. Products that are disconnected or moved from original installation.
- 10. Any products that have not been paid for, in full, to the authorized NHP dealer or contractor.

How To Obtain Warranty

If you have a problem with your unit or system or if you may have a warranty issue, please promptly notify your dealer within thirty (30) days of the issue. If it is determined that the Northern Heat Pump unit or component is the result of the problem, defective parts should be returned to the Northern Heat Pump factory, prepaid at your expense. All warranty claims and questions are to be directed to: Northern Heat Pump Warranty, Unit#3 201 South Railway Ave., Winkler, MB, Canada, R6W 1J9. Northern Heat Pump is not responsible for any delay in shipment of components and will make every effort to process claims as quickly as possible.

Limitations to Warranty

Warranty begins on the date of shipment of unit or return of product warranty registration card to Northern Heat Pump. All service must be performed by an authorized Northern Heat Pump service person. Northern Heat Pump will not be liable for consequential or incidental expenses, damages or losses with regards to any product or service. This warranty is given in lieu of all other express warranties, whether written or oral, and does not extend beyond the warranty duration set forth above.

Effective: January 01, 2009
